

PRINTED WIRING BOARD (PWB) TESTING

Quick-turn Certification of Production Boards

UL offers faster certification of a specific board design by testing the actual production PCB

Advances in today's electronic applications require certification to be faster and more options available to meet customer demands. The efforts in making UL 796 specialized samples can delay certain orders; therefore, this alternate service is provided where it may make sense for the customer. Certification of a production board may allow for faster time to market for RUSH orders; however it will be limited to the specific materials, construction stack-up and trace layout tested. Included in this service are consultations to ensure PCB compliance to end product requirements.

Engineering Project Review

- Review of BOM, construction stack-up and trace layout to determine the test program.
- May include consultation to ensure PCB compliance to end-product requirements.
- UL Certification provided as final deliverable. MyHome @UL features

Quick-Turn Certification¹

- Production boards may be tested
- Specific materials, construction stack-up and trace layout are identified for certification

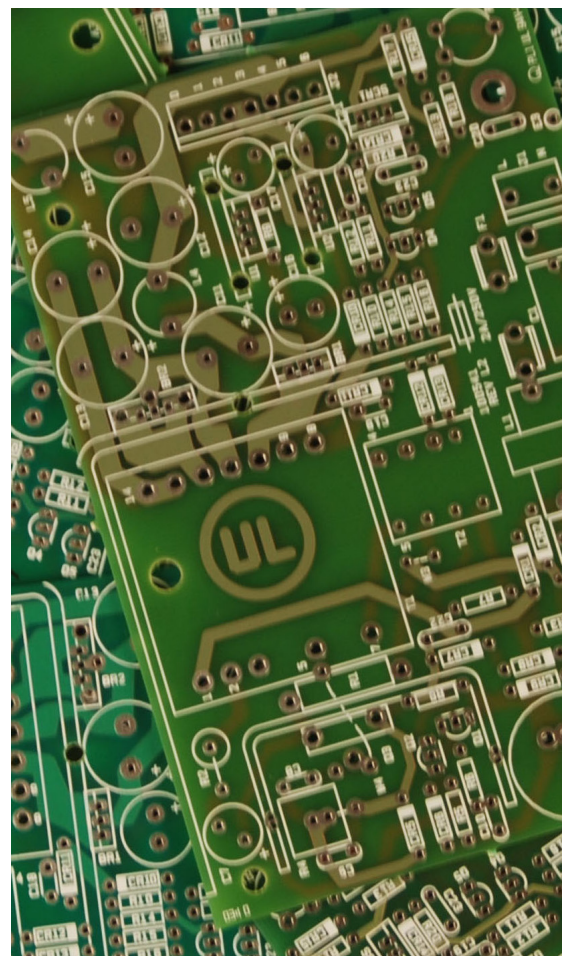

Benefits

- Much faster time to market
- No need for specialized UL samples
- Broader opportunities for PCB fabricators

Flexibility

- Limited flexibility as Part /Rev construction is set - Changes or Engineering Change Orders (ECOs) would require review for compliance.

¹ Note – Some restrictions may apply.
